STORYBOARDS

THE REAL WARDROBE

Every uniform in the game rebuilt from real clothes: real collars, lapels, ties, vests, overalls and fabric, in each outfit's own colours. No more uniforms painted onto a T-shirt.

- a uniform is BUILT now: a duty shirt, a three-piece suit with its own tie, a hi-vis gilet over a long sleeve, bib overalls over a tee, a bow-tie tuxedo
- the colours are still the game's own outfit designs (read off each painter), so a cop is the same navy up close and at 100 m
- only the MARKINGS come off the painting: the badge, the nameplate, the agency patch, reflective tape, a red cross, lettering
- real woodland camouflage printed on the body, not pixel blocks
- 64 outfits checked one by one, plus live Gang City

The chauffeur

Before: a waistcoat drawn as a polygon, a tie as a stripe and buttons as dots, painted round a long-sleeve tee. After: a real three-piece suit with its own collar, lapels, pocket square and knotted tie, dyed the chauffeur's navy.

BEFORE

AFTER

The chauffeur, head to toe

The same person, rig, pose and camera.

BEFORE

AFTER

Police

A real duty shirt (collar, placket, yoke, pockets); the nameplate and the agency patch lifted off the painter onto it.

police (woman, 31)

police (man, 36)

corrections (man, 41)

Law and security

sheriff (man, 53)

security (man, 40)

swat (man, 34)

Emergency

Reflective tape where the painter put it, on real cloth: the EMS shirt and the turnout coat.

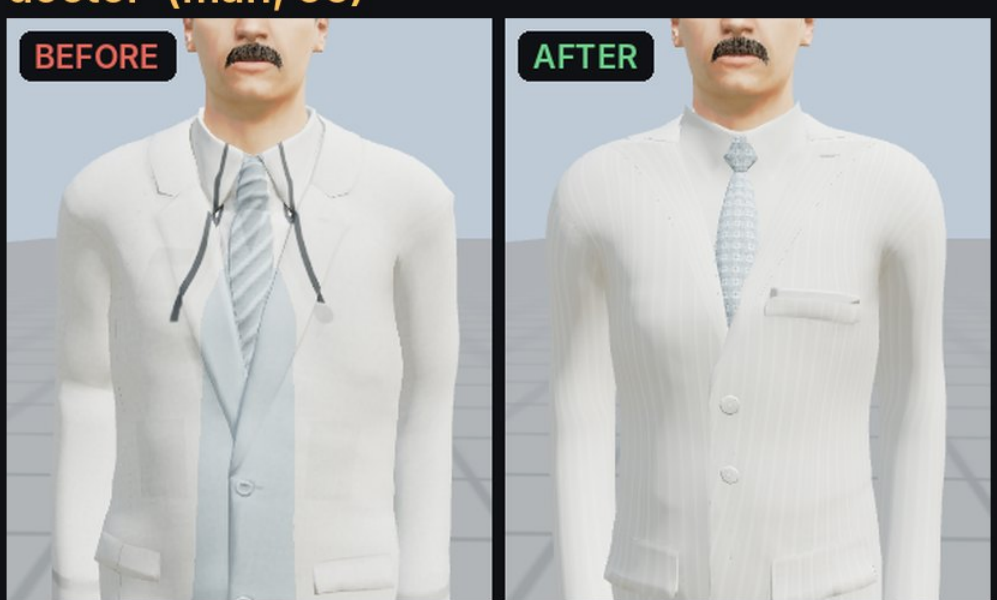

ems (woman, 34)

firefighter (man, 38)

doctor (man, 55)

Military

Real woodland camouflage in the uniform's own olive, printed on the body so it runs across every seam.

soldier (man, 26)

soldier (woman, 27)

hunter (man, 48)

Hi-vis

A real gilet (a work jacket with its sleeves cut away) over a long sleeve, the tape on the vest.

construction (man, 45)

hivis (man, 33)

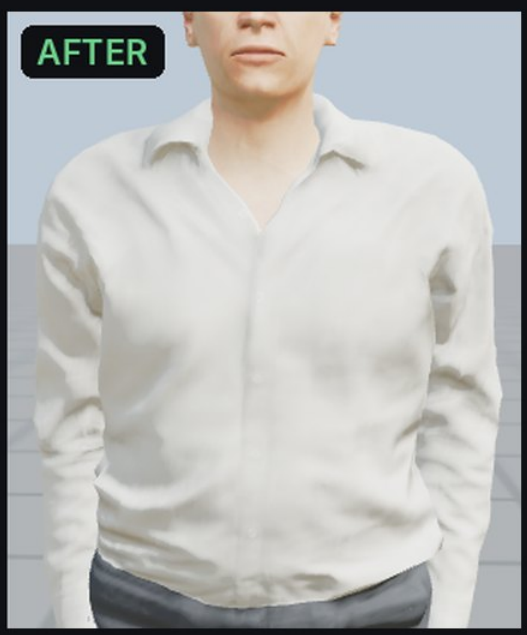

groundcrew (man, 37)

Kitchen and service

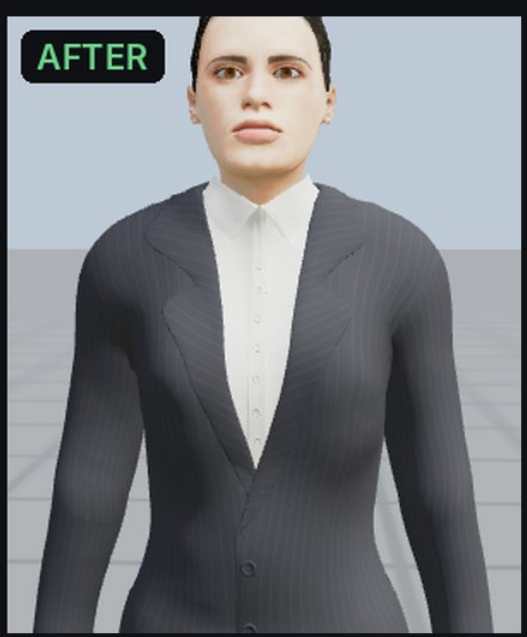

chef (man, 50)

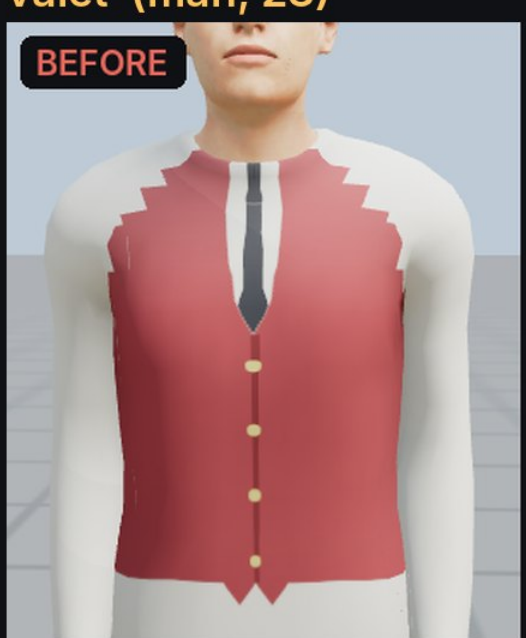

waiter (woman, 24)

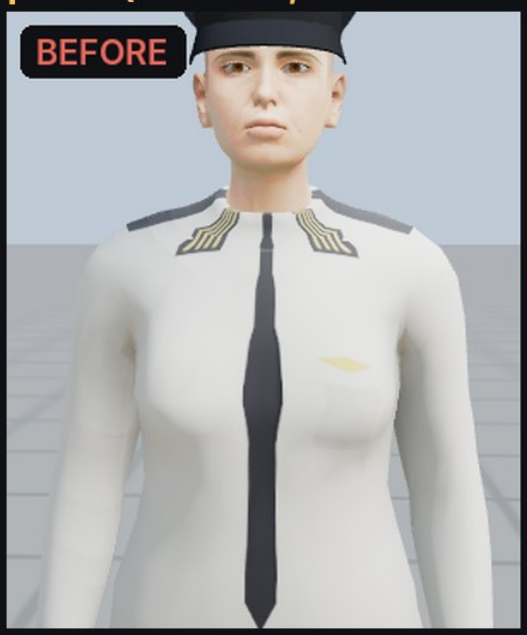

valet (man, 23)

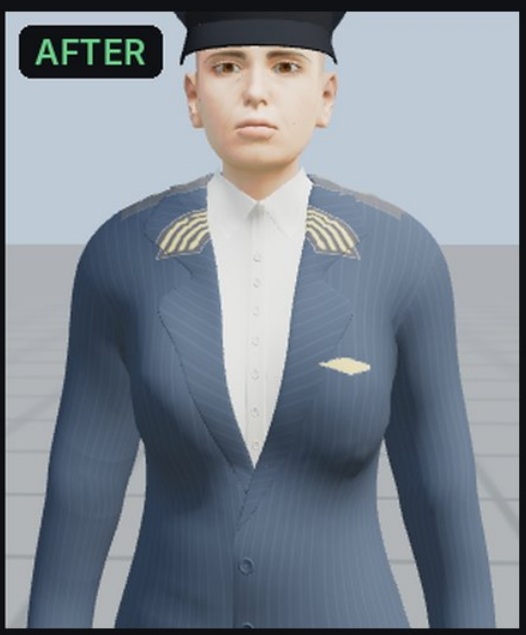

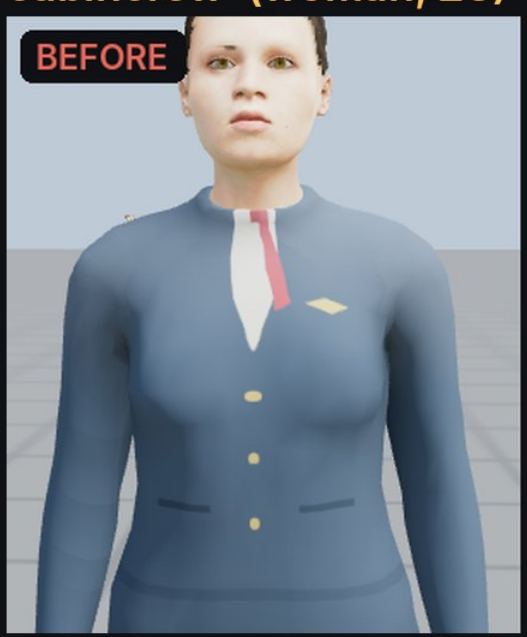

Travel

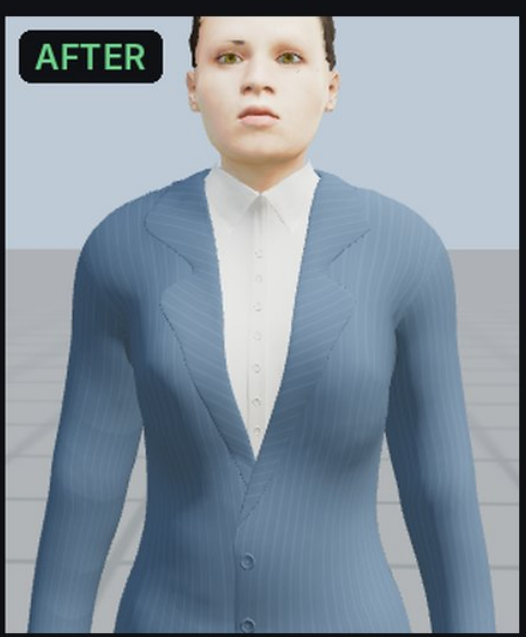

pilot (woman, 39)

cabincrew (woman, 28)

busdriver (man, 52)

The office

A plain shirt and a painted tie become a suit with a real tie.

office (man, 38)

office (woman, 35)

detective (man, 46)

Tailoring

The executive wears the suit's own cloth (a navy pinstripe with a paisley tie); the tuxedo its real bow tie and pleated shirt.

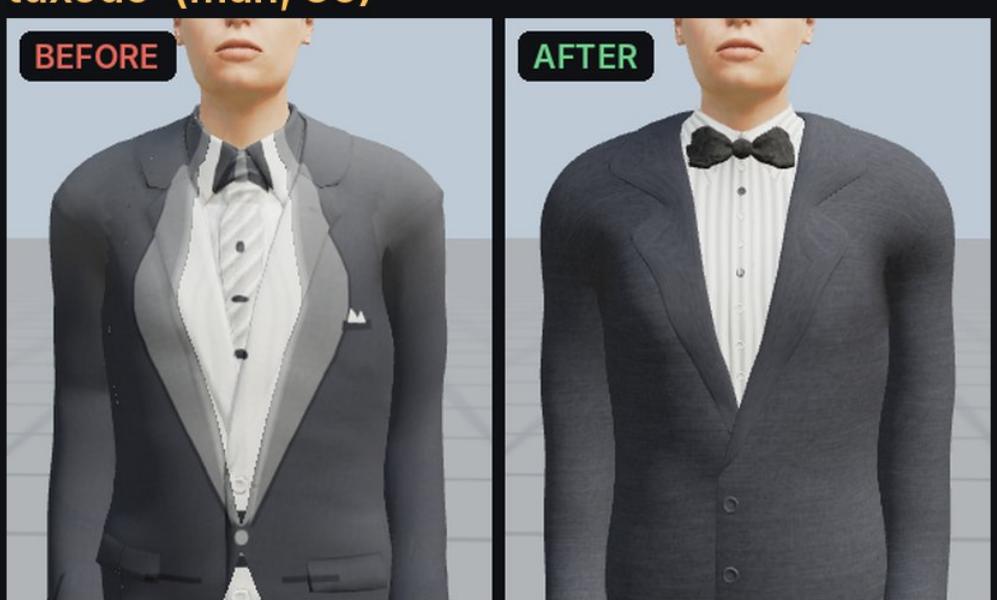

exec navy (man, 50)

exec navy (woman, 42)

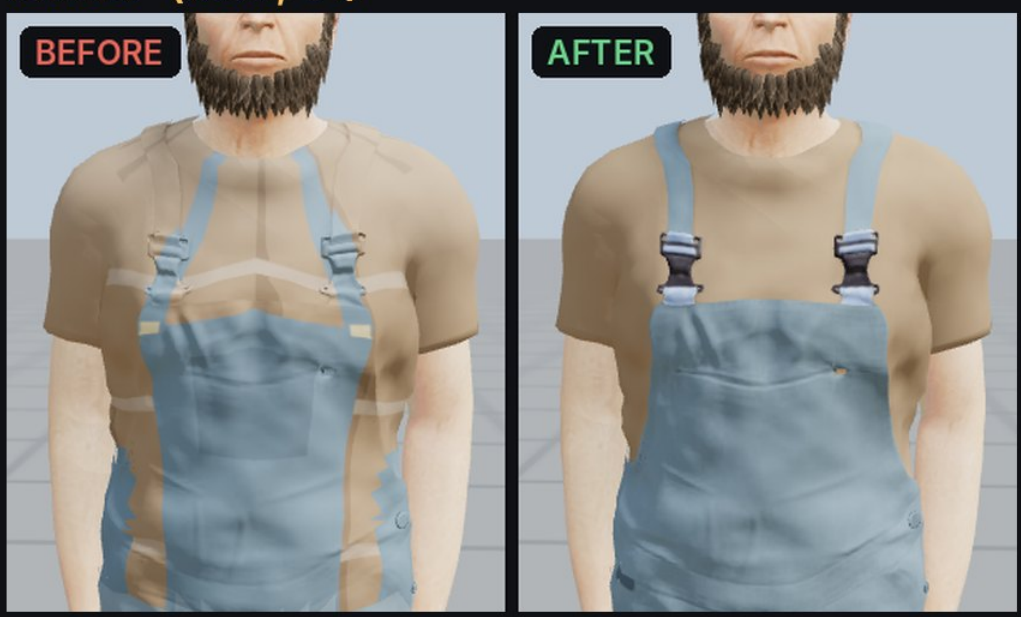

tuxedo (man, 36)

On the land and the water

Real bib overalls, a real campaign-hat ranger.

farmer (man, 61)

fisherman (man, 57)

ranger (woman, 33)

Inside

inmate (man, 33)

inmate tank (man, 28)

janitor (man, 58)

Street and sport

varsity (man, 20)

leather (man, 41)

lifeguard (woman, 22)

Every outfit, after (1/2)

Each one a real garment, or a stack of them, in the outfit painter's colours.

Every outfit, after (2/2)

Each one a real garment, or a stack of them, in the outfit painter's colours.

In the game

Gang City, live: a pedestrian of each trade on a street corner, dressed by the real wardrobe through the same LOD the city uses.

police, live in Gang City

construction, live in Gang City

security, live in Gang City

In the game (cont.)

waiter, live in Gang City

pilot, live in Gang City

firefighter, live in Gang City

In the game (cont.)

sheriff, live in Gang City

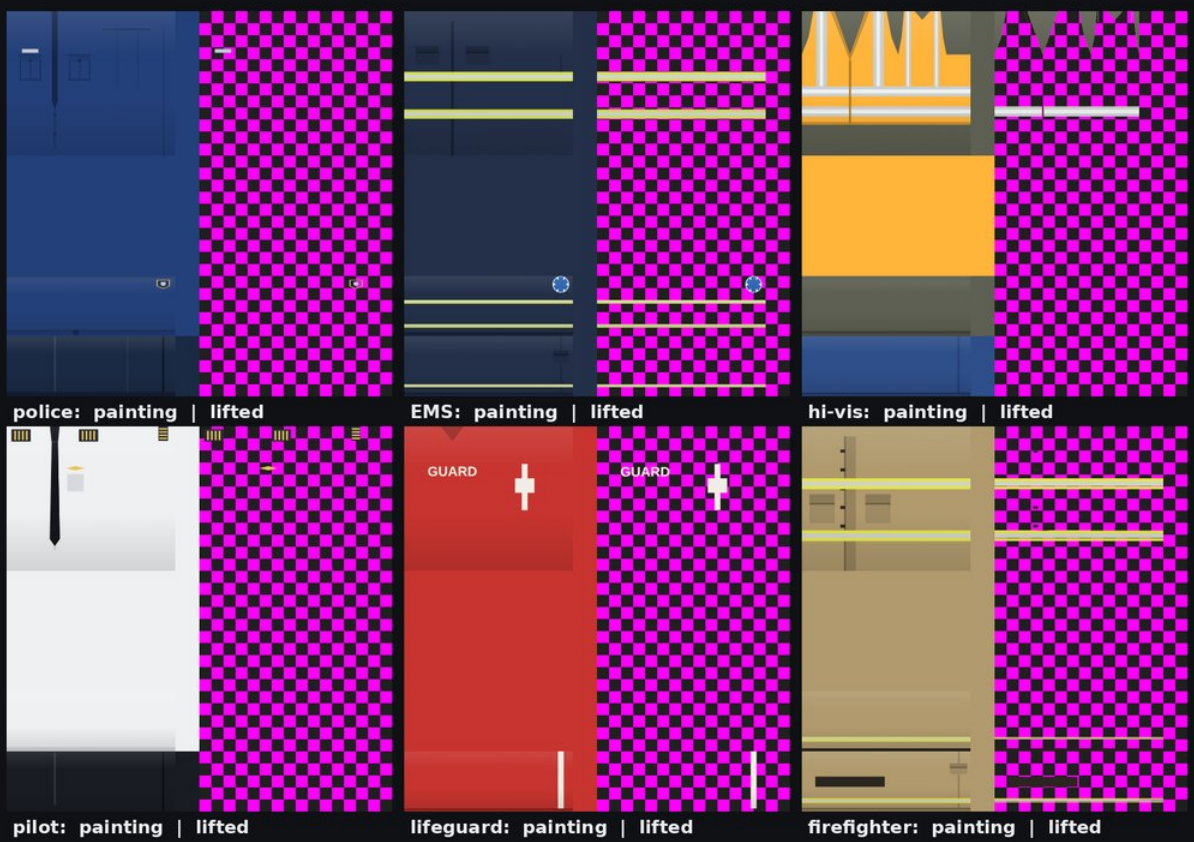

How: every garment knows its parts

Each UV island of each garment is classified once, from its own texture: blue = the main cloth, green = trousers / skirt, white = the shirt under it, red = the tie, yellow = buttons and buckles (kept), black = left off (a cameo pendant). The game dyes zone by zone and keeps the cloth's own light and dark.

How: only the markings come off the painting

Left of each pair the painter's picture, right what is lifted from it: a pixel that is not the cloth and not a shade of it, in a run that is small (a badge, a patch, a letter) or a band (tape). Painted vests, pockets, plackets and ties stay behind: the real garment has its own.

How it works

GARMENTS. tools/people/build_pack.py ships the real garments with their own textures: the casual suits, the elegant suit in seven real cloths (each with its own shirt and tie), a three-piece navy suit with a tie, a bow-tie tuxedo, a women's blazer suit, a denim work shirt, bib overalls, and two cuts made from them (a gilet and a tank top, sleeves cut away by the bones they ride). Every UV island is sorted into a zone (main cloth, trousers, shirt, tie, trim) with its mean luminance.

THE WARDROBE. src/entities/people.js maps every outfit the game has to garment layers. Each zone is dyed by its texels' own light and dark against the zone's mean, so the weave, folds, stitching and a tie's pattern come through in any colour. The colours are read off the outfit's own painter (city/clothes.js), which stays the one place an outfit is designed.

MARKINGS. The painter's picture is read at 1x for runs that are not the cloth and not a shade of it; small runs and bands stay, the rest (painted structure) goes; the kept cells are lifted at 4x, crisp, and laid on the garment through the body projection. In the city this happens on a quiet tick after the person appears.

CAMOUFLAGE. Woodland in the uniform's own colour (its base, a darker shade, an earth brown, a light khaki), printed from three noise fields in bind space: it rides the body and runs across every seam.

PRINTS. A patterned dress, gingham, a kid's printed tee: there the painter's picture IS the fabric, and it is still printed onto the real garment.
